### Writing

Technology has provided us with the means to acquire our basic necessities, we rely on technology to accomplish more things for us, but we also seem to have traded off those qualities that make us human. While technology is getting better, people are getting worse of it.

In my opinion, technology allowed us to progress, but we have lost our respect for the regulate things. One of the problems because of it is that sometimes modern technologies pollute the environment. It is true that technological progress gave us a lot of problems and we go backwards because of it, but I can't fully agree with the author.

For example, wars between nations are dependent on the technological progress of one nation over another. Throughout history, the loser is almost always the more technologically disadvantaged. And usually, the hunger for resources is actually driven by the need to feed technology in the first place.

To draw to the conclusion, I'd like to say that we can make better tools, but we use them to hurt ourselves more, than we would have without them.
